Solidline ST1

Solidline ST1

PRODUCT DESCRIPTION

The ultra-compact Solidline ST1 made of aluminum provides the always-on light. It is designed to be attached to the keychain. An AAA alkaline battery provides power so it surprises with a proper light output, even though its size is rather small. To ensure that the lamp in the bag can not accidentally be turned on, it is operated with a rotary switch. Highly efficient light output, in a tiny case at an unbeatable price – that distinguishes the ST1.

- Ultra-compact keychain flashlight
- Easy operation by a rotary switch
- Strong light output with minimal size and weight
- Battery operated with only one AAA alkaline battery
- Robust housing made of aircraft aluminum with a handy surface structure

PRODUCT SERIES

The Solidline-Series

High quality, low prices

Best quality for budget-conscious users of portable light – this is the concept behind the Solidline range designed and engineered by Ledlenser. The Solidline headlamps, flashlights and multi-purpose lights offer outstanding technologies and features to form a comprehensive assortment that is suitable for various purposes. In order to protect the purse even in the use phase, almost all lamps of the series are directly rechargeable versions or can also be operated with rechargeable batteries.

FOOTNOTES

The information pertaining to scope of delivery, appearance, performance, dimensions and weight corresponds to the information available at the time of publication. In the interest of product development, we reserve the right to change scope of delivery, appearance, design and color without prior notice. Product images may vary from the actual products and may show optional accessories which can be purchased separately. Errors and omissions excepted.

1) Measurement values according to ANSI FL1 in the respective setting. If no setting is explicitly indicated, the values refer to luminous flux (lumens/lm) and lighting range (meters/m) on the highest setting, and to battery duration (hours/h) on the lowest setting. A boost function (if available) can be used several times, but only for short periods of time. If the light is equipped with (a) colored LED(s), the measurement values are given for the white light or the white LED. If the light has different energy modes, the measurement is made based on the "energy saving mode".
